

Jeco Plastic Products For Gämmerler Robotic Palletizers

The precision of Gämmerler robotic palletizers demands storage accessories which are equally precise. Jeco plastic pallets are the perfect complement to Gämmerler palletizers, maximizing operating speed and minimizing storage and handling problems. Unlike wooden pallets, Jeco plastic pallets are virtually indestructible. Since they cannot absorb moisture, no dampness can migrate from Jeco pallets into signatures or bundles. Jeco plastic pallets do not splinter, fail under load, or cause load shifting due to sagging. No wood chips or broken pallet pieces mean less lost time due to machine stoppages. The smooth surface of Jeco plastic pallets reduces product damage. And because breakage and pallet repair are eliminated, fewer pallets are required to facilitate a plant.

Jeco plastic pallets are manufactured to exacting tolerances and are dimensionally stable. They are also very rigid, eliminating the deflection and curvature which can cause problems for electronic positioning sensors. The consistent weight of Jeco plastic pallets means that they can be used with confidence in electronic weighing and counting systems. Gämmerler systems with either roller or chain conveyors can use Jeco plastic pallets to great advantage, and models are available which can be accessed by forklift or floor jack from any side.

Jeco plastic pallets are also available to accommodate the special needs of users with Gämmerler rotary trimmers, compensated stackers, log stackers, and conveying equipment. Jeco variable roll pallets enable printers to handle roll goods more effectively. And both printers and newspapers with nonstandard needs will be pleasantly surprised at the low tooling costs associated with custom pallets by Jeco Plastic Products.
