

Jeco Plastic Products For Papermakers and Converters

The high value finished goods produced by converters, direct mailers, and label printers necessitate unique product handling solutions. Jeco plastic pallets are widely used by these manufacturers because of their endurance, reliability and economy. Jeco plastic pallets pay for themselves quickly—in both increased production efficiencies and customer satisfaction.

Unlike ordinary wooden pallets, Jeco plastic pallets are virtually indestructible. While initially more expensive than wooden pallets, Jeco work-in-process pallets routinely show a return on investment of less than two years.

The Jeco variable roll pallet—which accommodates rolls of various sizes by simply resetting moveable chocks on the pallet—enables converters to use one standard pallet configuration for all product handling needs.

Jeco pallets which accommodate mill size rolls are available, as well as runner roll pallets and roll pans for label stock. Jeco mill roll pallets do not rely on V saddles—which damage rolls because of point loading—but are custom designed with complex curves to provide multiple contact points. Jeco roll pallets are strong and rigid. They do not flex, thus ensuring that heavy rolls cannot fall from the pallet.

For label converters who ship die cut labels which must be protected in transit to the product packager, Jeco can provide custom pallets tailored to the exact dimensions of the finished labels and the label customer's needs.

Direct mailers with high speed automation value the dimensional stability and rigidity available with Jeco plastic pallets and specialized containers. Jeco plastic pallets and containers can be internally reinforced with steel for additional rigidity and strength.
