

Jeco Plastic Products For Printers

Printers around the world rely on Jeco pallets to protect their work in process and warehoused product. Jeco pallets are nearly indestructible, and many Jeco printer customers have used the same pallets for more than a quarter of a century. Although initially more costly than ordinary wooden pallets, Jeco pallets generally provide a demonstrated return on investment of less than two years. Jeco plastic pallets eliminate splinter injuries common with ordinary wooden pallets, as well as damage occurring when wooden pallets break under the weight of printed product. Jeco plastic pallets reduce printed product damage and eliminate the need to constantly replace and repair pallets.

For sheetfed printers, Jeco makes pallets which fit neatly into both the feeder and delivery of virtually every press in use today. These standard Jeco pallets are available for quick delivery, without tooling charges. Jeco dual entry pallets permit forklift access from any side, and are especially useful when laminators and die cutters are used. Jeco pallets have the precise dimensions necessary with new high-speed logistics presses.

For large format web printers, Jeco pallets are available in a wide variety of sizes and surface finishes, to accommodate a full range of storage needs. Jeco pallets are especially useful in high rise storage systems where load integrity is a must. Small format and roll-to-roll web printers use both Jeco flat pallets and the new Jeco variable roll pallets to handle unprinted roll stock and finished goods.

Printers with unique requirements not solved by Jeco stock products often find that one of the many designs in the Jeco inventory can be quickly and inexpensively modified to solve their problems.
